UID EX 5

Task Analysis – Movie Ticket Booking System

Introduction

Task Analysis is the process of breaking down a user's interactions with a system into smaller, manageable steps to understand how users achieve their goals. In this case, the goal is to successfully book a movie ticket through a mobile application.

It helps in:

- Understanding the tasks users perform while booking tickets.
- Identifying the correct sequence of actions.
- Recognizing decision points (seat availability, payment success).
- Improving the overall booking experience.

Key Tasks Identified in the Movie Ticket Booking System

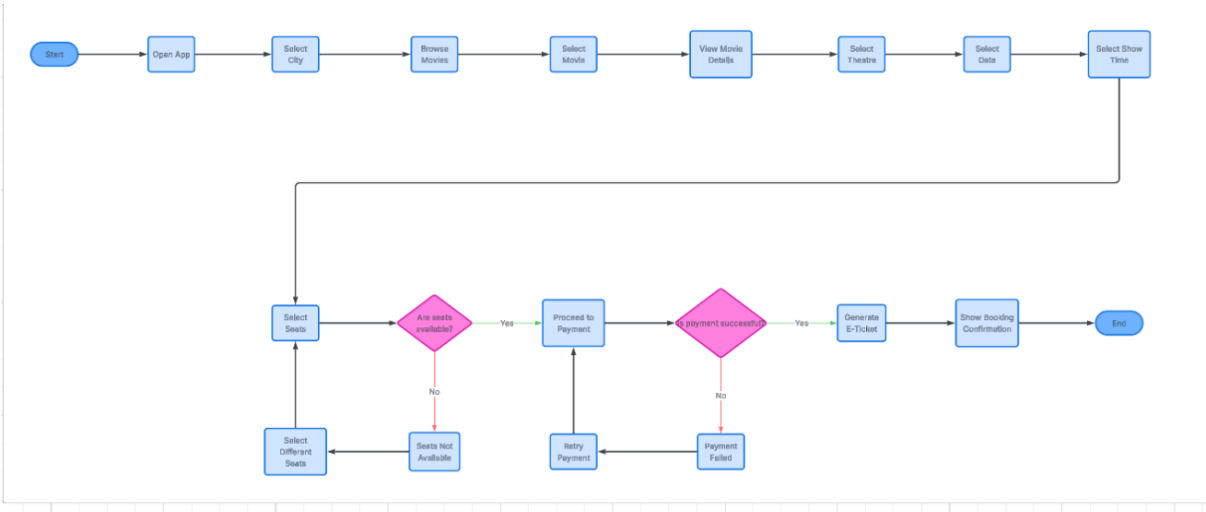
1. Opening the application
2. Selecting the city
3. Browsing available movies
4. Selecting a movie
5. Viewing movie details
6. Selecting a theatre
7. Choosing date
8. Choosing show time
9. Selecting seats
10. Checking seat availability
11. Proceeding to payment
12. Verifying payment status
13. Generating E-ticket
14. Viewing booking confirmation

User Flow – Movie Ticket Booking Application

User Flow represents the steps users take to complete the movie ticket booking process from start to end.

Main Booking Flow

Start
→ Open App
→ Select City
→ Browse Movies
→ Select Movie
→ View Movie Details
→ Select Theatre
→ Select Date
→ Select Show Time
→ Select Seats
→ Check Seat Availability
→ Proceed to Payment
→ Payment Successful?
→ Generate E-Ticket
→ Show Booking Confirmation
→ End



Detailed Step-by-Step User Flow

Step 1: Start

- The user launches the movie ticket booking application.

Step 2: Open App

- The home screen appears.

Step 3: Select City

- The user selects their preferred city to view available theatres and movies.

Step 4: Browse Movies

- The system displays movies currently showing in the selected city.

Step 5: Select Movie

- The user selects a movie from the list.

Step 6: View Movie Details

- The user views movie information such as:
    - Duration
    - Genre
    - Ratings
    - Description

Step 7: Select Theatre

- The user chooses a theatre where the movie is playing.

Step 8: Select Date

- The user selects the preferred date.

Step 9: Select Show Time

- The user selects an available show time.

Seat Selection Decision Flow

Step 10: Select Seats

- The user selects available seats from the seating layout.

Decision: Are Seats Available?

- **If YES:**
  → Proceed to Payment
- **If NO:**
  → Seats Not Available
  → Select Different Seats
  → Return to Seat Selection

Payment Process Flow

Step 11: Proceed to Payment

- The user chooses a payment method.

Decision: Is Payment Successful?

- **If YES:**
  → Generate E-Ticket

→ Show Booking Confirmation
→ End Process

- **If NO:**
  → Payment Failed
  → Retry Payment
  → Return to Payment Screen

Alternative Paths in the System

1. **Seat Unavailable Path**
   - Seats Not Available
   - User must select different seats.
2. **Payment Failure Path**
   - Payment Failed
   - User retries payment.

These decision points ensure that the system handles errors and provides recovery options.
